

THE APPLIED ECOLOGIST PLAYLIST

Journal of Applied Ecology & Ecological Solutions and Evidence

Welcome to The Applied Ecologist playlist!

We've put together a list of on-demand and live presentations and posters we encourage you to view today (all times in GMT).

Don't forget to use the Q&A box to ask the speaker questions.

Tuesday 15 December

On-Demand Talks

- Community Ecology** **Florencia Yannelli, Freie Universität Berlin**
"Better to be naïve: Naïveté of native communities rather than belowground changes best explain invasion success of *Senecio inaequidens*"
- Invasive Species** **Michele Dechoum, Federal University of Santa Catarina**
"Direct and indirect effects of an invasive non-native tree on subtropical coastal ecosystems"
- Soil Ecology and Plant-soil Interactions** **Emilia Hannula, Netherlands Institute of Ecology**
"A case of mistaken identity: estimating multispecies occurrence metrics in the presence of pairwise misidentification errors"

On-Demand Posters

- Invasive Species** **Emma Hudgins, Carleton University**
"A unifying phylogenetic model of amplification and dilution effects of host biodiversity on pest establishment"
- Martin Nunez, CONICET**
"Invasive pines rely more on mycorrhizas"
- Species Interactions** **Maria Pappas, Democritus University of Thrace**
"Beneficial soil microbes to combat herbivorous pest in pepper"
